Exclusive Updates

Whats's new in Beta 2

Every item below came out of Beta 1 feedback threads. If you asked for it, it's probably here.

Seamless AI across your workspace

AI is now integrated across all your projects giving users an user the head experience. With Features such as,

- No need to explain your projects again and again every time you start a new chat.
- AI will provide you with a Roadmap based on your Goals & Needs.
- Quickly know what to do next in your projects with real time suggestions, and validate your progress.

Other new Features

- Added Whiteboards.
- Create notes directly in Flow.
- You can now rename folders, files, and links.
- Notes can be exported as doc files & pdfs, and whiteboards can be exported as pdfs.
- Chat history with AI will now be stored.
- Overall User flow is improved significantly.

Reworked Repository - A Dynamic, living space

- The Repository is now Flow, which implies what it means - Your Research roadmap where you can store all your resources.
- Now you can import all your files from flow directly into your notes and even into AI chats.
- Coming shipped with more personalization options to provide you flexibility with your projects.

A Fresh new look

- Light theme is now available giving users an option to switch between dark and light theme as they prefer.
- UI hierarchy is improved and navigation is much more simpler.
- A carefully calibrated palette that lets you work longer without visual fatigue.

Reviews

Feedbacks based on Beta testing across India's leading design and innovation institutes including NIFT, NID, and UPES

- ★★★★★

As long as I have uploaded all my research papers and don't have to fish around for what I researched and where it went, It already takes away half of the pain, or else half the time I would be going to my history search to find the Information I had once found, just because I took a break for a few days, but if I put it in the repository I can't possibly miss it.
- ★★★★★

Never really thought of an app for research, so the idea it itself was interesting, all the small details and options, for adding files and links were very helpful.
- ★★★★★

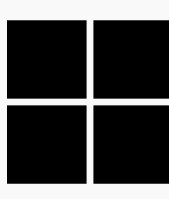

Having a repository is definitely a time-saver, but could be more efficient with the suggested improvements. The application is not unnecessarily complex, which is very user-friendly.
- ★★★★★

I feel like research most of the times specially for students is very rushed, in that case yes Vyrix is helpful in keeping tabs ok whats done and what is left.
- ★★★★

The Roadmap, Flow repository and Workspace. Loved the range of customization in the native Vyrix document. Being able to add Canva/Figma file directly is such a cool feature. Being able to mark projects complete or Incomplete. And being able to sort the projects in the folders in order of priority.
- ★★★★★

Well, to look back I had AI that I could use at an instant to find research papers related to the subject and the fact that I could upload a lot of different types of files into one place. Also the To do list being In the front space of the app really helped me (I normally don't use to-dos - hence getting distracted) stay focused as I was eager to check something off the list.
